

F1 ENVIRONMENTAL PTY LTD

THE KNIGHT 1000 OILY/WATER SEPARATOR

ACCESSORIES

The Separator is designed to accommodate a Wash Trough which is installed on top of the Separator as a lid with the Trough draining directly in the Separator.

Additionally a matching Kerosene Bath is also

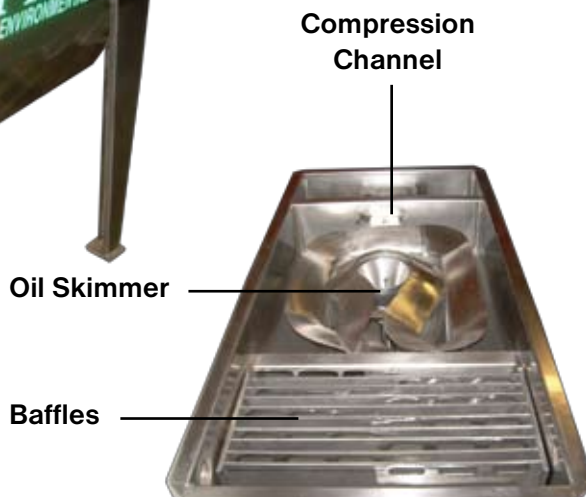

available which can be connected via 40mm pipe to either the Separator or Collection Pit.

By utilising the most up to date Oil Compression Channel Technology The Knight 1000 Separator removes oil and solids with the minimum amount of water.

Constructed entirely of stainless steel, the unit is free of rust or corrosion, has easy to clean removable baffles and will last a lifetime.

The F1 Environmental built Separator has been approved by the CRC and meets all council requirements for the treatment of water before

entering the sewer. This unit is produced in Far North Queensland, is a once only purchase and is currently the ultimate in cost effective water treatment available in today's market.

TECHNICAL DATA

Dimensions:

1200mm (L) x 600mm(W) x 900 (H)

Construction:

100%Stainless Steel

Flow Rate:

1000 litres per hour
